SUBJECT INDEX

Actinomycetes—
  antagonistic—
    antibiotic substances produced, 294
    bacteriostatic action, influence of nitrogen, 288
    description of certain species, 287–293
    distribution in nature, 281–295
    inhibition of bacterial growth, 285–291
  bacteriolytic and bacteriostatic properties, 286
Adsorbed ions, *see* Ions adsorbed
Adsorbed phosphate, *see* Phosphorus adsorbed
Aggregation, organic matter and sesquioxides associated with, 343–352; *see* also Soil physical properties.
Aluminum, content of lateritic soils, 11–15
Ammonia, loss from alkaline soils after ammonium sulfate applications—
  as affected by—
    degree of alkalinity, 402–403
    rate of application, 404–405
  mechanism of reaction, 405–407
Antagonism, *see* Actinomycetes antagonistic
Azotobacter, *see* Nitrogen fixation by
Bacteria, numbers in decomposing leaves, 69–70
Base-exchange capacity—
  of organic matter, as affected by grinding and composting, 194
  of soils, as affected by nitrogenous fertilizers, 143–144
Books, *see* end of letter B
Boron—
  deficiency symptoms in—
    beets, 57–59
    chicory, 62
    corn, 63
    mangles, 59–61
    radishes, 61
    rutabagas, 62
    turnips, 62
    wheat, 63
  effect on yield and chemical composition of—
    barley, 63
    beets, 58–59
    chicory, 61
    corn, 64
    mangles, 61
    radishes, 61
    turnips, 63
    wheat, 63

Carbon-nitrogen ratios of—
  organic fertilizer materials—
    relation to nitrogen availability, 411–423

Carbon-nitrogen ratios of—
organic fertilizer materials—(*continued*)
relation to nitrogen availability, 411–423
vegetative and nitrification studies, 414–418
washed organics, 419–420
Citrus, fungal infection, as affected by nutrition, 303–311
Clay—
electron microscope studies, 149–158
fractionation with electron microscope—
attapulgite, 155–157
beidellite, 150–152
bentonite, magnesium, 153–155
nontronite, 152–153
montmorillonite, *see* Montmorillonite
separation from soil, 238–239
soil colloidal, composition, 83–100
Clostridium pasteurianum, effect on nitrogen fixation by *Azotobacter*, 107
Colloidal systems, *see* Soil colloidal systems
Dilatometer—
measurements on soils, 224–230
technique, new, 222–224
volume–freezing point relations, 221–231
Donnan equilibria—
application of thermodynamic relation, 208–211
extra thermodynamic methods of approach, 211–215
in ideal systems, 203–204
individual ionic activities, 204–208
thermodynamic discussion of, 202–203
use in soil suspension studies, 215–218
Donnan systems, 199–200, 209–213
Electron microscope, clay studies, 149–157
Exchange capacity, *see* Base-exchange capacity
Exoenzyme systems of roots, *see* Roots exoenzyme systems
Fertilizers, nitrogenous—
acid-forming, neutralization in relation to nitrogen availability and soil bases, 127–148
effect on soil—
base-exchange capacity, 143–144
pH, 142
residual effect on alfafa growth, 145
Forests, effect of soil on plant types, 335–341
Fungi—
citrus infection by, effect of nutrition, 303–311
development in soil, as affected by organic matter composition, 297–302
numbers in decomposing leaves, 70
Ions, adsorbed, availability to plants, 247–251
Iron—
content of lateritic soils, 11–15
corrosion in soil—
as affected by oxygen supply, 159–177
gas changes produced, 173–174
Leaching, *see* Soil leachings
Leaves, decomposition of—
changes in chemical composition, 72–75
microflora changes, 69–70
reaction changes, 71
Lysimeters, leachings from—*see* also Soil leachings
chemical analysis, 138
effect of treatment on—
ammonia content, 133
nitrate content, 134
nitrogen content, 136
Manganese, active—
content of soils, 255
determination in soil, 253–257
Microorganisms, population changes in decomposing leaves, 69–70
Moisture—
content of soils—
plaster of paris blocks as indicators, 35–46, 275–279
preparation of plaster of paris blocks for determination, 36
field capacity, measured by—
electrical resistance of plaster of paris blocks, 277
thermal radiators, 123–126
potential of soils—
calculation from tensiometer data, 395–396
comparison of cryoscropic and static vapor-pressure methods, 397–399
cryoscopic method, theory of, 396, 397
osmotic, 393, 394
Montmorillonite, interaction with organic matter, as affected by—
composting, 194
grinding, 194
lignin, 195
pH, 195
type of organic matter, 192–195
Night soil, nitrogen conservation, 381–389
Nitrification—
in soil, as affected by—
chloride ions, 118
potassium chloride, 113–121
potassium ions, 119

Nitrification—(*continued*)
of organic materials—
effect of C-N ratio, 414–418
water-soluble fraction, 421–422
Nitrobacter numbers, as affected by potassium chloride, 116
Nitrogen—*see* also Ammonia, Carbon-nitrogen ratios
changes during storage in—
feces, 383, 384
night soil, 384–386
urine, 384–385
conservation in night soil, 384–386
content of—
organic materials, 413
proximate analysis fractions, 420–421
soils, as affected by nitrogenous fertilizers, 137
fixation by *Azotobacter*—
as affected by iron source, 108
as affected by other bacteria, 105–112
losses from soil by leaching, 132–136
Nitrosomonas numbers, as affected by potassium chloride, 116
Organic matter—
base-exchange capacity, 194
chemical composition—
effect on soil mold flora, 297–302
in aggregated soil fractions, 347–350
relation to soil aggregation, 343–352
content of soils—
effect of cultivation, 327–328
effect of nitrogenous fertilizers, 137
in aggregated fractions, 345
interaction with montmorillonite, 191–199
Peats of New Jersey—
nature and properties, 447–461
types—
alluvial, 455–457
forest, northern, 453–454
forest, southern, 454–455
sedge and reed, northern, 449–453
tidal marsh, 455–457
utilization, 459–460
Piedmont soils, *see* Soil Piedmont
Phosphorus—
adsorbed, utilization by plants, 237–245
available, content of soils, 327
content of soil extracts, 30–31
determination in solution, 29
effect on phosphatase activity of roots, 359–360
fixed in clay, utilization by plants, 237–245
fungal infections of citrus, 307–311
organic, dephosphorylation by soil catalysts, 439–446
Potassium, effect on fungal infections of citrus, 303–307
Proximate analysis of washed organics, 418
Roots—
excretions from, 353–356
exoenzyme systems of, 353–366
phosphatase from—
activity and source in corn and tomato, 353–366
activity, as affected by phosphorus nutrition, 359–360
activity, as affected by pH temperature, 360–362
occurrence and characteristics, 355–356
Selenium—
availability to plants, 47–53
content of—
plants, 49–50
soils, 49–50
extraction from soils, 52
occurrence in soils, 47–53
Sesquioxides, associated with aggregation, 350
Silica—
content of
lateritic soils, 11–15
soil extracts, 30–31
determination in solution, 28
removal from solution, 27–28
Silica—sesquioxide ratios of soils, 11–15
Slaking, *see* Soil slaking
Soil—
base-exchange capacity, 143–144
bases, as affected by nitrogenous fertilizers, 140
catalysts, dephosphorylation of organic phosphorus by, 439–446
clay colloidal—*see* also Clay
chemical composition, 87–98
fractionation, 84–87
thermal analysis, 90–91
x-ray pattern lines, 92–94
colloidal systems, significance of Donnan equilibria for, 199–219
extracts, silica and phosphate determinations in, 27–34
lateritic, and, with iron concretions—
analyses, 11–15
parent materials, 16–17
profile descriptions, 4–10
leachings, from lysimeters, 130–141
moisture, *see* Moisture

Soil—(*continued*)
organic matter, *see* Organic matter
oxygen, effect on iron corrosion, 159–177
physical properties—
as affected by cultivation, 328–329
natural and homoionic, 262–263
profile layers, 101–103, 330
Piedmont,—
physical properties of B horizons, 101–103
shrinkage, 102
series, analyses, descriptions of, or experiments with—
Aiken, 227, 327–328; Bedford, 113–121; Brookston, 62; Cecil, 263; Cookport, 336; Corning, 372; Dekalb, 336; Emmet, 59; Fargo, 371; Geary, 334; Holland, 125; Huerhuero, 368; Leetonia, 336; Linne, 368; Marshall, 262; Maury, 255; Maywood, 368; Melbourne, 327; Millville, 463; Nacimiento, 368; Newberg, 329; Olympic, 327; Orange, 102; Orangeburg, 238–239; Orem, 463; Putnam, 149, 262; Ryde, 372; Sacramento, 368; Salt Lake, 463; Susquehanna, 238–239; Taylorville, 463; Thomas, 57–59, 63–64; Tirzah, 102; Vina, 368; White Store, 102; Willamette, 327, 330; Woodrow, 463; Yolo, 39, 125, 368, 371, 374–375.
slaking—
influencing factors, 268–269
natural and homoionic soils, 266–272
sterilization, effectiveness of toluene, 440
systems, dry cohesive, mechanism of water attack on, 259–273
terminology, *see* Terminology
Thailand, 1–26
tillage, effect on physical properties, 325–334
types, relation to tree types, 335–341
urease—
activity, as affected by treatment, 370–378
occurrence, 367–372
origin, 373–375
wilting point, thermal radiator measurement, 123–126
Soil and root system—
electrochemical relations, 177–189
potential difference, as affected by—
anions and cations, 183
fertilizers, commercial, 184
time of watering, 182
Sugar beet—
chemical composition, 428–430
distribution of minerals in, 431–432
Terminology, lateritic soils, 17–26
Thailand soils, 1–27
Thermal radiators, water-permeable, jacketed—
as indicators of—
field moisture capacity, 123–125
permanent wilting percentage, 123–125
construction, 124
Tillage, *see* Soil tillage
Toluene, soil sterilizing agent, 440
Ureaselike activity in soil, 367–380
Water attack on dry, cohesive soil systems, 259–273
Wilting point, *see* Soil wilting point
Zinc—
content of—
plants, 322
rocks, 465
soils, 320, 322, 465
deficiency symptoms—
influence of soil composition, 319
pineapples, 318–319
plant composition and, 321–323
polarographic determination—
plant tissue, 315–316
soils, 316–317
relationships of some Utah soils, 463–468
